                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          38;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Web: www.genoscope.cns.fr)
Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the Isogenic strain y2; on bw sp, the same strain used for the BDGP's Pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

Determination of this BAC-end sequence was carried out as part of a collaboration with the European Drosophila Genome Project (EDGP) - http://www.edgp.ebi.ac.uk - This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billaud at CEPH (Centre d'Etude du Polymorphisme Humain) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton project grant are pavan. It has been constructed in the vector

a 256 c 236 g
            mid-log phase in TAP (acetate-containing) medium in the light, TAP medium in the dark, HS (minimal) medium in ambient levels of CO2 and HS medium bubbled with 5% CO2. FOLYA MRNA was purified from each sample, pooled and cDNA synthesized. The cDNA was directionally cloned into lambda ZAP II (Stratagene) in the ECORI (5'y and XhoI (3') sites. pBluescript II SK-plasmids were excised from the lambda ZAP clones by superinfection with EXASSIST (Stratagene) phage. The library was normalized using method 4 described in Bonaldo et al (1996) Genome Research 6: 791-806."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   brain, liver, kidney, heart, spleen, ovary, and muscle. The UI-R-EI library consisted of a mixture of individually tagged normalized libraries constructed from 8, 12 and 18-day embryo. The tag is a string of 3-5 nucleotides present between the Not I site and the oligo-dT track which allows identification of the library of origin of a clone within the mixture. The subtracted library (UI-R-CI) was constructed as follows: PCR amplified cDNA inserts from UI-R-CO clones from which 3' ESTs had been derived was used as a driver in a hybridization with the UI-R-CO library in the form of single-stranded circles. The remaining single-stranded circles (subtracted library) was purified by hydroxyapatite column chromatography, converted to double-stranded circles and electroporated into DH10B bacteria (Life Technologies) to generate the UI-R-C1 library. This procedure has been previously described (Bonaldo, Lennon and Soares, Genome Research 6: 791-806, 1996)"

HrpW includes an HRE-like domain that is rich in Gln, Ser and Gly and which includes 6 imperfect glycine-rich repeats with many acidic and polar residues that align with similar repeats with many acidic and polar residues that align with similar crepats in the HrpZ proteins of P. syringae pv. syringae and P. Syringae pv. tomato. The amino acid sequence of this region suggests alternating beta-sheets and turns that may form a barrel credit and bacterial pel proteins. The HrpW protein or isolated DNA molecule can be used to impart disease resistance to plants, to cenhance plant growth and/or to control insects on plants. This is achieved by applying the HRE protein in a non-infectious form to plants or plant seeds. Alternatively, transgenic plants or plant seeds. Alternatively, the protein control of the plants or plant seeds.

The present sequence is a hypersensitive response elicitor protein encoded by dspE gene from Pseudomonas syringae. The protein elicits a plant pathogen's hypersensitive response and used to impart stress resistance to plants.
                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence

                                                                                                                                                                                                                                                                   The present sequence represents a hypersensitive response elicitor polypeptide. The specification describes hypersensitive response elicitor polypeptide fragments, which do not elicit a hypersensitive response. Instead, the proteins impart disease resistance to plants, enhance plant growth, and/or control insects. The polypeptide fragments may be used to these properties to plants. The plants which may be treated in this way include vegetables, crops and ornamental plants such as alfalfa, rice, wheat, barley, rye, cotton, sunflower, peanut, corn, potato, sweet potato, bean, pea, chicory, lettuce, endive, cabbage, brussel sprout, beet, parsnip, turnip, cauliflower, cabbage, brussel sprout, beet, parsnip, turnip, cauliflower, carrot, squash, pumpkin, zucchini, cucumber, apple, pear, melon, citrus, strawberry, grape, raspberry, pineapple, soybean, tobacco, tomato, sorghum or sugarcane, Arabidopsis thaliana, Saintpaulia, petunia, pelargonium, poinsettia, chrysanthemum, carnation or zinnia.

                      The hypersensitive response eliciting protein (hrp) or polypeptide is produced as part of an active defense by plants against incompatible pathogen infections. The hypersensitive response is a rapid localised necrosis. The hrp protein and gene when used in nucleotide constructs are useful for providing disease resistance t plants, insect control to plants, and enhancing plant growth (enhancing fruit size and earlier colouration and maturation), by direct application of the protein to plants, or by producing transgenic plants or seeds using the hrp gene.
                                                                                                                                                                           New Erwinia amylovora hypersensitive response eliciting gene and protein - useful for providing transgenic plants and seeds with enhanced growth, and insect and disease resistance

The patent discloses a method to impart stress resistance to plants by applying a hypersensitive response elicitor in a non-infectious form to a plant or seed. The present sequence is a hypersensitive response elicitor protein from Erwinia amylovora. The protein is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Hypersensitive response elicitor; plant.

The specification describes hypersensitive response elicitor polypeptide fragments, which do not elicit a hypersensitive response. Instead, the proteins impart disease resistance to plants, enhance plant growth, and/or control insects. The polypeptide fragments may be used to these properties to plants. The plants which may be treated in this way include vegetables, crops and ornamental

Shikata S,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention describes a detergent composition which contains a protopectinase having an optimum pH 7 or higher against protopectin and polygalacturonic acid substrates. Inclusion of protopectinase gives a composition that provides better removal of muddy soll, particularly from socks. The present sequence represents pectic acid lyase from Bacillus sp. strain KSM-P15, which is used in an example from the present invention. Pectic acid lyase exhibits protopectinase
                                                                                                                                                                                                              AAW77412 standard; Protein; 197

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence represents a pectic acid lyase isolated from microorganism Bacillus sp. KSM-P15. The pectic acid lyase has high pectic acid lyase activity which degrades pectin in plant cell walls and fibre in vegetables, and so is useful as a component of detergents, a food-processing agent, or a fibre-processing agent. The pectic acid lyase has a higher optimum reaction pH (10.3-10.7) than known Bacillus pectic acid lyases (pH 8-9.5) and so has wider industrial applications. Details present pectic acid lyases, the new enzyme has a high enzyme

                                                                                                                                                                                                                                                                                                                                                                                                    (CBD) that are operably linked to each other. It shows optimum activity at pH greater than 9 and temperature 55 degree centigrade. It can be use in detergent compositions, for cleaning hard surfaces, for machine treatment of fabrics, for improving the properties of cellulosic fibres yarn, woven or non-woven fabric, for the degradation of plant material e.g. recycled waste paper, mechanical paper-making pulps or fibres subjected to retting process, for preparing animal feed and for processing wine or juice. DNA encoding the enzyme can also be used for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present sequence is pectate lyase I, which is a pectin degrading enzyme derived from Bacillus licheniformis, ATCC 14580. The enzyme comprises a catalytic active domain and a cellulose binding domain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Misc-difference

A DNA probe from this P. cynomolgi sequence, designated P236-7, is useful in the construction of an anti-malarial vaccine.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Qy
                            This represents a UspAl antigen of Moraxella catarrhalis strain TTA24.

Nucleic acid sequences encoding the UspAl and A2 antigens of
M. catarrhalis isolates O355, O46E, TTA24 and TTA37 can be used in
G. M. catarrhalis isolates O355, O46E, TTA24 and TTA37 can be used in
G. genetic vaccination. An antigenic composition or vaccine containing
antigenic peptides from UspAl or UspA2 antigens are used to induce an
immune response in mammals against M. catarrhalis and can be used to
treat infections such as cittis media, sinusitis, lower respiratory
tract infections. They can also be used as immunity enhancers for other
bacterial, parasitic or viral antigens, to raise antibodies and as
immunoassay reagents for detecting specific antibodies. The antibodies
are useful for passive immunisation and as immunoassay reagents.
Detection of the epitopic core sequence, by immunoassay or by PCR, is
used to diagnose infection. The Usp antigens encoding nucleic acid
sequences are also used to produce recombinant proteins and for screening
for potential anti-M. catarrhalis agents, while their fragments are
                                                                                                                                                                                                                                                                                                                                                                      New peptide(s) containing the core epitope of Moraxella catarrhalis Usp proteins - useful in, e.g. vaccines to prevent or treat M. catarrhalis infection, and antibodies for passive immunisation
                                                                                                                                                                                                                                                                                                                                   Claim 30; Pages 152-155; 237pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present sequence is that of a deletion allele, termed lov-1(sy582del), of the Caenorhabditis elegans LOV-1 protein (see AAY95556), generated by genomic deletion of the PKD/channel domain of the lov-1 gene by PCR. LOV-1 is an orthologue of the human polycystin-1 (PKD1) gene that is defective in human autosomal dominant polycystic kidney disease (PKD). The LOV-1 autosomal dominant polycystic kidney disease (PKD). The LOV-1 ransduction in sensory neurons. It is required for 2 male sensory behaviours, 'response' of males to hermaphrodites, and 'location' of the vulva. Nematodes such as C. elegans that express mutant or wild-type LOV-1 or PKD-2 (see AAY9557) can be used to study the functions of the proteins encoded by these genes, to screen for other genes involved in PKD, to identify mutations involved in the disease, and to screen for drugs that affect PKD. Behaviours controlled by the action of the genes or gene products are identified and used in the assays. Hence, an animal model is provided that permits study of the etiology of FKD and provides a tool to identify the genes involved in the disease pathway, to identify compounds that may be used to treat or alter the disease

Location of vulva; LOV-1 gene; nematode; mating behaviour; Caenorhabditis elegans LOV-1 (location of vulva) protein. 10-OCT-2000

(first entry)

```
'location' of the vulva. Nematodes such as C. elegans that C. express mutant or wild-type LOV-1 or RKD-2 (see AAY95557) can be used to study the functions of the proteins encoded by these genes, to CC screen for other genes involved in PKD, to identify mutations CC involved in the disease, and to screen for drugs that affect PKD. CC Behaviours controlled by the action of the genes or gene products CC are identified and used in the assays. Hence, an animal model is provided that permits study of the etiology of PKD and provides a C col to identify the genes involved in the disease pathway, to C identify compounds that may be used to treat or alter the disease C progression, lessen its severity or ameliorate symptoms.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present sequence is that of the polypeptide encoded by the Caenorhabditis elegans LOV-1 gene (see AASO043), an orthologue of the human polycystin-1 (PKD1) gene that is defective in human autosomal dominant polycystic kidney disease (PKD). The LOV-1 protein is involved in chemosensory or mechanosensory signal transduction in sensory neurons. It is required for 2 male sensory behaviours, 'response' of males to hermaphrodites, and 'location' of the vulva. Nematodes such as C. elegans that

              Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
